EDUCATION

McMaster University

Hamilton, ON

Software Engineering & Management CO-OP (B.Eng.Mgmt)

2023 – 2028

- **Courses:** Object-Oriented Programming, Data Structures & Algorithms, Software Testing, Computer Networks
- **GPA/Awards:** 3.8/4.0, Generation Google Scholar 2025, Yves & Cynthia Bled Black Women in Eng Scholarship

EXPERIENCE

Uber

Toronto, Ontario

Software Engineer Intern

May 2025 – Aug 2025

- Developed a Retrieval Augmented Generation pipeline to fully automate the creation of extensive reports on competitors, significantly reducing manual effort and increasing efficiency by **97%**.
- Leveraged **LLamaIndex** and **HuggingFace** embedding models to embed processed data, enabling precise semantic search across past reports and accurate context retrieval for different queries.
- Implemented a processing system using **pandas** to parse and map multi-source data into structured formats improving LLM context coherence and resulting in **95%** similarity in summaries and analysis.
- Conducted rigorous testing and refactoring to lay the groundwork for the automation of future recurring reports.

McSCert – McMaster Department of Computing & Software

Hamilton, Ontario

Software Engineering Research Assistant

Apr 2024 – Aug 2024

- Utilized **MATLAB**, **Simulink** and **ROS** to optimize a clustering and tracking model for an autonomous ego vehicle
- Designed and implemented a track-level fusion algorithm integrating two 2D LiDAR sensors and a Zed camera, significantly improving vehicle environment awareness.
- Leveraged **NumPy**, **pandas**, and **Matplotlib** to develop data analysis scripts, visualize sensor data, and enhance the vehicle's real-time tracking performance.

PROJECTS

Coinquest | ElleHacks 2026

Feb 2026

- Built an AR financial-literacy web app with **React** and **JavaScript** where kids earn virtual coins from adventure quests and immediately visualize spending vs. saving by placing 3D items into their real environment.
- Implemented real-time AR world-building interactions using **WebXR Device API** + **Three.js** including plane detection, tap-to-place, drag repositioning, pinch-to-scale and optimized the render loop to keep AR interactions responsive while users manipulate multiple objects in-scene.

FederaTea | Hack The North 2025 - 2nd place Federato API Track

Sep 2025

- Built a full-stack underwriting dashboard using **React**, **TailwindCSS**, **DaisyUI** and **Vite**, streamlining Federato's workflow for more efficient risk prioritization.
- Developed a **FastAPI** backend integrated with **Gemini AI** and Federato's API to retrieve and process thousands of JSON records into dynamic, data-driven insights.
- Designed a priority-scoring system that ranked underwriting cases in real time to optimize decision-making.

ACTIVITIES & LEADERSHIP

NSBE McMaster

Hamilton, Ontario

Hunt Conference Chair & Senator

May 2024 – Present

- Planned and executed the 11th Annual Hunt Conference over 6 months, with **170+ attendees** and **12 company partners**, resulting in **\$15,000+** in sponsorship funding and the largest multi-school Black engineering conference hosted by any Ontario chapter to date.
- Advocated for **100+** Black engineering students at McMaster University on a national scale in the NSBE Region 1 Senate by contributing to policy decisions and initiatives.

SKILLS

Languages: Python, C++, C, Java, Go, MATLAB, Simulink, JavaScript, TypeScript, SQL, HTML/CSS

Libraries: React, Express.js, Tailwind, Pandas, NumPy, Matplotlib, PyTorch, LlamaIndex, HuggingFace Transformers

Tools & Platforms: Linux, ROS2, Jupyter Notebooks, REST APIs, Git, GitHub, Bash, Docker, CI/CD, Agile, Jira, Maven, JUnit
